BQT Solutions designs & supplies security technology for Corrective Services facility in NSW

John Genner, Managing Director of BQT Solutions Limited is pleased to announce the latest project to design and supply a purpose built smart card technology module for access control within a correctives services facility in New South Wales.

The project involves the design and delivery of 80 purpose built modules to withstand all elements within a corrective facility, including concealment within the décor. As security in such a site is paramount, the modules are used by Staff, Wardens' and Officers for secure access control movement within the facility using their unique ID smart cards.

The modules read the unique identification number from card holders ID smart cards when held within close proximity and then transmits this information to the access control system. The final decision to allow or deny access for that person through the access point is made by the system following predetermined rules set by an administrator.

This initial delivery is the first phase of a gradual security technology upgrade/enhancement throughout the corrective services system and is another example of BQT's ability to adapt its miPASS technology in environments that demand customisation.

John Genner
