

Key Rollover configuration solutions

SOLUTION FACT SHEET

You're designing a new access control system and require the ability to systematically change the keysets in case of a compromise to security or for best practice. What do you do?

BQT has the SOLUTION, providing readers, credentials and an encoding system solution that provides an optional key rollover facility to ensure that secret reader keys may be changed in reaction to a security compromise or under a best practise schedule.

Our key rollover solution is tailored to individual clients requirements and provides peace of mind that minimises the security risk and ensure virtually seamless continuous operation of the client's security asset.

The BQT Solutions encoding/configuration software does not record or store any raw data from the key rollover and diversified keys further enhances and ensures that keys are not accessible to unauthorised parties.

BQT Solutions can assist you in this process and provide procedures to conduct a Key Rollover and advise on the best and most appropriate method for your organisation to implement this option in a system.

Your choice of BQT Solutions Reader:
